

The frequency fee of a ship or an aircraft radio station and of an aeronautical mobile radio transmitter is calculated according to the formula below:

$$C_{\text{mode}} \cdot S \cdot P$$

C_{mode} is a coefficient of mode of operation. It is defined based on the mode of operation of the frequencies assigned in the licensee's radio licence. The table below shows the coefficients of mode of operation.

Mode of operation	C_{mode}
Satellite frequencies	20
Maritime MF and HF frequencies	15
Frequencies for maritime VHF, distress and radionavigation and frequencies other than maritime and aeronautical VHF frequencies	15
Aeronautical MF and HF frequencies	15
Aeronautical VHF and distress frequencies	15
Maritime and other UHF frequencies	7
Frequencies for aeronautical radionavigation	3
